External Vibrators

## PEV60 Air External Vibrator

The PEV60 is a high-power air vibrator for effective concrete consolidation in heavy-duty applications.

- Air-powered design for portability and flexibility: Easy to move around the job site and works without needing an outlet.
- Very powerful vibrations for demanding applications: Handles tough jobs requiring exceptional consolidation strength.
- Ideal for heavy-duty concrete consolidation: Perfect for precast concrete structures, thick slabs, and other demanding projects.
- Suitable for precast concrete, mass pours, and bulk material handling: Can handle a variety of challenging concrete consolidation tasks.
- Requires an air compressor for operation: Needs a separate air compressor to function.

### Specifications

- Model - PEV60 Air
- Item No.- 5000228046
- Weight - 16.3kg
- Force - 60kN
- RPM - 14,500rpm

The PEV60 external vibrator is a heavy-duty air-powered tool designed for powerful concrete consolidation in demanding jobs. It utilizes an air compressor to deliver very strong vibrations that eliminate air pockets and ensure a strong, uniform concrete finish, especially in heavy-duty formwork like precast concrete structural segments, steel tables, or bulk material handling. This air-powered design makes it ideal for situations where electricity is unavailable.
